NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PAPER LISTS GUIDELINES GOVERNING PRIVATE SALES

Prague RUDE PRAVO in Czech 8 Oct 86 p 4

[Article signed (pa): "Private Sale of Products by Citizens"]

[Text] Citizens may sell products on domestic market only in amounts and in the manner designated by Law No 127/1981 of SBIRKA, regulating domestic market, by Notice No 83/1982 of SBIRKA or as described by special regulations.

Citizens may sell plant and animal products from their own small-scale agricultural production and products gathered in the forest without a permit of the organs of the state administration, except when special regulations state otherwise. Citizens may sell homemade or home fashioned products only with a permit issued by the local (or municipal) national committee in the jurisdiction of which the sale is to take place. The permits issued by the appropriate local committees will specify what type of product is to be sold, its amount and the place of sale. They will also state the period for which the permit is to be valid and any other specifications, as needed. While holding such a permit, a citizen may only sell his products at a market or place designated by the national committee. He must carry the permit on his person and he is also required to post a notice with his legibly written name and place of permanent residence in a visible spot at his place of sale.

Local (municipal) national committees issue market regulations which designate, in conformity with the interests of society, the requirements governing private sale of products, most importantly the time during which the sale may take place, the cost charged for the market space or stand, the obligation to give one's name and place of permanent residence, and so forth.

The permit may be revoked if the citizen is not using the permit although he has no specific valid excuse for failing to do so, if the citizen fails to honor the requirements stated by the law or by special regulations or if the interests of society require it.

The sale of homemade or home fashioned products is not a citizen's automatic right under the law. The granting of a permission to do it is up to the appropriate national committee which has to evaluate each request submitted by a citizen and decide whether the issuance of the permit would mean a

suitable and desirable addition to the sortiment available at the domestic market or whether it would involve products the sale of which is not desirable (various colored tops) or whether it would be the case of an illegal entrepreneurial middlemanship (bed linen, jeans, and similar).

FINANCIAL AID FOR DROUGHT DAMAGE DISCUSSED

Budapest NEPSZABADSAG in Hungarian 25 Sep 86 p 5

[Interview with Pal Kiss, a deputy president of the Hungarian National Bank, by Imre Dogei: "Financial Assistance to Alleviate Drought Damage"; date and place of interview not given]

[Text] Farm production does not observe the calendar year. The planting, emergence, and growth of crops, and eventually their harvesting, proceed in accordance with the biological processes, to which also the financial aspects of farming must adjust. Most farms receive their first major influx of cash only after harvesting their small grain. When the wheat yield is good, the farms have more money to spend. When the wheat yield is poor, as it once again is this year, the farms think twice about how they spend their forints.

Moreover, the production process is such that the investments for next summer's cash crops, for example, must be made already now. When everything is going well, a farm can afford to advance itself the price of the commercial fertilizer, seed, and plant protectants. But when a farm has been eviscerated to such an extent that it has no resources to pay for these things, it urgently needs outside help.

Measures have been promulgated recently to alleviate the most pressing problems of the farms which find themselves in financial difficulties because of the drought. Perhaps the most significant among the measures is the range of credits that the farms are able to obtain, under favorable conditions. Which is understandable. After all, the factories and trade enterprises will not sell even the large-scale farms anything merely on their promise to pay. In cooperation with government agencies, the Hungarian National Bank has responded quickly: agricultural cooperatives and state farms may borrow from the bank to buy the materials and current assets which are indispensable inputs for next year's output. We interviewed Pal Kiss, a deputy president of the Hungarian National Bank, about the background of the "drought measures" and--taking advantage of this opportunity--about the financial possibilities of modernizing agriculture.

Many Farms Affected

[Question] At the beginning of this year, agricultural policymakers were still concerned primarily with turning around the branches of livestock production,

which are experiencing profitability problems. Then the summer months undermined considerably the hopes attached to crop production. The damage to crops caused by the drought is estimated at between 10 billion and 12 billion forints. How does the bank see the farms' financial situation?

[Answer] Agriculture began the year fairly auspiciously, with much better prospects of profitable production than previously. At the beginning of the year, the modifications effective as of 1986 in the system of regulation still held promise of a 1.5-billion-forint increase of farm income. The efforts to improve profitability were aimed at turning back a few unfavorable trends that were just emerging; these efforts essentially supported the requirements of economic policy. Unquestionably, the most significant factor has been the restoration of incentives for the various branches of livestock production.

But the drought has intervened and dashed to a large extent the hopes that arose in the wake of the year's promising start. Naturally, not only on the farms raising livestock, where the scanty supplies of feed and fodder could jeopardize even the realization of the planned targets; but also in the case of what are regarded good cash crops. In other words, we have to remedy problems that are national in scope and affect a wide circle of large-scale farms. In spite of this, it is true that the drought has not affected all farms equally. In some parts of the country, this is the first year that drought has caused any significant damage. But elsewhere the drought has been continuing for several years, shaking the economic and financial equilibrium of many large-scale farms. The problems are the most pressing in Borsod and Szabolcs-Szatmar Megyes, and on farms cultivating the sandy soils of the Alföld [Great Plain]. Many agricultural cooperatives and state farms have become bad credit risks.

Financial assistance is being offered the farms whose crop yields the drought has reduced by at least 20 percent. The purpose of the comprehensive measures is to help the troubled farms over a rough stretch, and to prevent their going broke as a result of the temporary difficulties caused by the drought. The measures essentially provide temporary tax relief, and credits on favorable conditions.

Incomes, Interests

[Question] Such tight situations truly reveal the contradiction which exist between the profitability of farming (moderate in many places, and lately declining) on one hand, and the high rates of interest on the credits provided to expand and modernize production on the other. Perhaps we could say that with the low interest rates you are attempting to resolve this contradiction, albeit only temporarily?

[Answer] No matter how deeply the problems are rooted in the present, we must still consider primarily the future. Under our existing technical and technological conditions, we must rely primarily on the conscience and skill of our agricultural workers to harvest in the next few weeks, with as little loss as possible, the crops still in the fields. And what is perhaps even more important, we must see to it that the financial problems of the drought-stricken farms do not prevent them from laying the basis for next year's harvest.

With the means at its disposal, the bank too is aiding the realization of the latter objective. To buy the seed, commercial fertilizer and plant protectants necessary for a suitable harvest next year, the farms may obtain credits repayable from their sales within a year. Of the 11-percent interest payable on such credits at present, the farms may claim a rebate of 7 percentage points from the state budget. In addition, several hundred million forints have been set aside to provide 2- to 5-year loans with which the drought-stricken farms will be able to replenish their depleted stocks of current assets.

It is in everyone's interest that we offset at least partially the damage caused by drought. In addition to mobilizing their own resources, the farms need also society's resources and compassion. This is reflected in the bank's attitude as well: we will be flexible in our credit practices when the expected cash-flow problems arise. According to the regulations now in force, we have to demand in such cases a security deposit during the year, or a guarantor to assume joint and several liability. We will be waiving these requirements temporarily, because the securing of such credits will be solved in the meantime centrally.

Modernization Can Help

[Question] The farms in need of aid were probably relieved to hear of these measures, which will allow them to catch their breath. But we must bear in mind that our farm production has also many other problems besides the drought. How can we overcome them?

[Answer] Even when entire society is closing ranks to aid the farms, we must not forget that the drought cannot be blamed for everything. Admittedly, we are unable to prevent natural disasters. But human intervention can indeed influence the financial impact of drought damage. To this end we must set out with determination on the path leading to the alleviation of agriculture's structural stresses. For the drought has shattered farming especially where its production costs are higher than what is socially necessary and warranted.

The foreign marketing opportunities that are being utilized only partially are also a warning. There is a pressing need for the modernization of farm production, in the interest of producing farm products that are cheaper, of better quality, more appealing, and hence more readily salable. Greater competitiveness achieved in this manner is a real prerequisite for improving profitability. There is now a good opportunity to accelerate this process. With World Bank loans, using foreign resources, development programs of the order of ten billion forints are being launched, specifically for the comprehensive modernization of meat production and processing, respectively of crop production. In the wake of these programs, hundreds of farms will be able to operate more efficiently and profitably, and thereby improve their ability to assume risks.

[Question] The banking system's reform will take effect at the beginning of next year. How will this affect agriculture?

[Answer] With the help of the banking system's pending reform, relations between the banks and their customers will be placed on a new basis. The farms will be able to choose among several banks to borrow from and to keep their

bank accounts. This in itself will not mean an expansion of the supply of credit, but the resources for providing credit will be distributed differently than up to now. Competition among the banks and their profit incentive could produce even in the short run a favorable change in the quality of the services that the banks provide.

The large-scale farms, too, will be able to choose the bank whose services can best aid their farming. As of 1 January, the restrictions on keeping bank accounts will be left in place temporarily. At the start, each farm will be assigned the bank that will keep its account. From the middle of next year, however, these restrictions will be lifted, and the large-scale farms will be free to choose the bank they want to do business with. But for loans they will be able to turn to any one of the five new commercial banks, already from the beginning of the year.

INADEQUATE DATA SEEN TO HINDER SOCIALIST ECONOMIC THEORY

Warsaw ZYCIE GOSPODARCZE in Polish Vol No 33 17 Aug 86 p 6

[Article by Stanislaw Czaja: "Signs of Crisis" under the rubric "Polemics: 'Gaps in the Theory of Socialist Economics'"]

[Text] Discussion of problems of the political economics of socialism is continuing. This is demonstrated by numerous Press articles on the subject, especially by the recent article by Professor M. Mieszczański, "Gaps in the Theory of Socialist Economics" (ZYCIE GOSPODARCZE, No 12, 1986). Many of the author's theses have to be accepted but some of them require, in my opinion, further elucidation.

It is difficult to acknowledge as entirely true the main thesis of that article, namely, that the incapacity of socialist political economics has acquired the nature of gaps in that theory. Despite the many accomplishments of socialist political economics, we should rather speak of its crisis. This is demonstrated by the fact that recent years have not brought any genuinely interesting solutions of theory. Instead, attempts to elaborate many by now classical theses of K. Marx and V. Lenin -- and in Polish economics, of O. Lange and M. Kalecki -- are continuing. The accomplishments of Marx, Engels, and Lenin continue to be treated too dogmatically. Sentences taken out of their context often are supposed to serve as justification of theses for which many authors can cite no other proof. Fragments of utterances of the Marxist classics are supposed to provide specific proof of the truthfulness of the views proclaimed by these authors.

Many elements of the theory of socialist economics require empirical proof. The several decades of experience of the socialist economy afford potential possibilities for such a verification. The main obstacle though is the considerable incapacity of the existing system for the spread of information throughout the society, as reflected in the incompleteness of the available information and its sluggish or complicated flow and ineffective processing, owing to both the shortage and improper utilization of means of electronic data processing. All information-related technical and programming innovations continue to be treated as games and amusements rather than as techniques and instruments for collecting and processing social and economic data. (Footnote) (See the interview with Professor W. Turski, "A Deeply Mathematical Matter," in ZYCIE GOSPODARCZE, No 15, 1986, pp 1, 4.) The neglect of this field

produce grave consequences to economic practice and theory, by adversely affecting rational economic management at micro- and macroeconomic levels. Solutions of theory that are devised on the basis of incomplete information acquire the nature of postulates that mirror inaccurately actual socioeconomic processes. Such concepts reflect wishful thinking rather the situations occurring in a real economy. The incapacity of the information system produces far-reaching effects. Incomplete (or fallacious) information leads to fallacious conclusions, and these in their turn provide the basis for a fallacious economic policy.

Another consequence of the incapacity of the information system is the failure to understand the divergence between the reality and its theoretical models. As a result, deviations of reality-simulating economic models from real socioeconomic processes are arbitrarily interpreted. Criteria objectivizing the assessment of the existing deviations are not being explored. This leads to the paradoxical situation in which author himself sharply criticizes the mismatch between a particular model of reality in studies by other investigators but glosses over the same flaws of that model when utilizing it in his own studies. This also results in barren criticism for criticism's sake rather than in creative Marxist criticism of many achievements of bourgeois economics.

The incapacity of the information system, when combined with the lack of suitable instruments and techniques of research, also often prompts escapist resorting to the so-called social aspects of economic management. For this reason, I fear that at the present development stage of socialist political economics too much importance is attached to combining the social with the praxiological aspects, which may results in the abandonment of praxiological research, although I am in accord with M. Mieszczański's belief in the ultimate mutual identity of the social and praxiological approaches.

Quantitative research in the present stage of development of the theory of socialist economics assures, in my opinion, further successes in this scientific discipline. Academician V. Nemchinov, the founder of the Soviet school of mathematical economics, stated, "At present it is particularly important for economists to become social engineers and for the science of economics to become an exact science. Economic studies should be based not on elaborating ideas contained in the literature but on the concrete facts and figures of the living reality.... To economic science, figures and facts are as air is necessary for us to breathe." (Footnote) (V. Nemchinov, "Izobrannyye proizvedeniya" [Selected Works], Vol 3, Moscow, 1967, pp 140-143.) This is not, however, the principal argument in favor of developing quantitative research.

The socialist economy, which is an element of the world economic system, has rather suddenly found itself in the situation of having limited resources and means of production. This has posed to it the by now classical problems of the Robinsonian concept of economics. Qualitatively new conditions are necessitating an expansion of the scope of socialist political economics to allow for the ecological factor or for aspects of the coexistence of different systems of society, political and economic rivalry, and the armaments burden, which are to a large degree modifying the concepts of theory and the economic

policy being pursued. In this connection, it is more important that the coexistence is not a short-term phenomenon. As for optimizing the allocation of limited resources, this requires a broad application of mathematical apparatus and quantitative methods. The experience of the non-Marxist thought in this respect is extremely rich and its critical utilization is worthwhile.

Relations between Marxism and bourgeois economics should not be feared. It is dogmatism and non-objective assessment of the cognitive value of certain concepts that are much more dangerous.

A review of the achievements and shortcomings of the theory of socialist economics produces the impression that in many respects it has not developed any further ever since Marx and Lenin made their creative contributions to it. Dogmatism has led to forfeiting many years of what would otherwise have been further growth of the political economics of the socialist system of society. Marx foresightedly warned many times against such an interpretation of his accomplishments. It is also worth bearing in mind that the achievements of the classics of Marxist economics (K. Marx and F. Engels) with regard to socialist economics are in the nature of occasional comments and do not pretend to the appellation of theory of socialist economics.

Gaps or a crisis? Undoubtedly, the inability to resolve many problems of theory and practice points to a crisis. Despite the existence of the incompletely utilized dialectical method, researchers are encountering major methodological and practical problems. These problems partly ensue from the incapacity of the information system, and partly from cognitive dogmatism. The gaps in the theory of socialist economics -- and they are numerous at present, as extensively discussed by M. Mieszczański -- are a symptom of a crisis situation. The incapacity of the information system and the cognitive dogmatism underlie this crisis of the theory of socialist economics, and overcoming them can provide the conditions for eliminating that crisis itself and its symptoms, namely, the gaps in the political economics of socialism.

41. Supplemental Funds to Sociopolitical and Public Organizations

Basic Purpose 06--Other General Public Purposes

Sociopolitical Organizations

Subsidies to the Central Committee of the League of Communists of Yugoslavia

804 06-2	International activity	9,912,000	9,912,000	9,912,000
805 06-2	Financing the program for scientific documentation of the international working class movement	5,946,000	5,946,000	5,946,000
806 06-2	Program for financing publishing activities abroad	13,942,000	13,942,000	13,942,000
807 06-2	Financing the operation of the Josip Broz Tito Political School in Kumrovec	23,162,000	23,162,000	23,162,000
808 06-2	Publication of the collected works of Josip Broz Tito	3,500,000	3,500,000	3,500,000

Subsidy to the Federal Conference of the
Socialist Alliance of Working People of Yugoslavia

809 06-2	Financing the work program of the Federal Conference	235,577,000	312,594,657	312,594,657
810 06-2	Subsidy to the news- paper BORBA	280,000,000	280,000	280,000
811 06-2	For the journal JUGOSLAVENSKI PRE- GLED [YUGOSLAV SUR- VEY]-Serbo-Croatian edition	7,925,000	7,925,000	7,925,000
812 06-2	For the journal MEDJUNARODNA POLI- TIKA [INTERNATIONAL POLITICS]--Serbo- Croatian edition	6,338,000	6,338,000	6,338,000
813 06-2	For the journal ZENA DANAS [WOMAN TODAY]	2,027,000	2,017,000	2,027,000
814 06-2	Financing the work program of the Yugo- slav Federation for Environmental Protection	6,353,000	8,767,250	8,767,250
815 06-2	Conference for Local Community Development of Yugoslavia	4,000,000	5,233,178	5,233,178

Subsidy to the Presidium of the Conference of
the Socialist Youth League of Yugoslavia

816 06-2	Financing the work program of the Conference	120,600,000	168,133,742	168,133,742
817 06-2	Celebration of Youth Day	45,403,000	45,403,000	45,403,000
818 06-2	Financing the inter- national activities of collective mem- bers of the Social- ist Youth Alliance of Yugoslavia	3,120,000	3,120,000	3,120,000
819 06-2	For the newspaper MLADOST [YOUTH]	29,900,000	39,900,000	39,900,000
820 06-2	For the journal IDEJE [IDEAS]	5,400,000	5,400,000	5,400,000
821 06-2	For the Youth Labor Festival	2,880,000	2,880,000	2,880,000
822 06-2	Other activities	28,000,000	28,000,000	28,000,000

Subsidy to the Federation of Associations of
Veterans of the National Liberation War of Yugoslavia

823 06-2	Financing the work program of the Federation	55,400,000	84,953,478	84,953,478
824 06-2	For the newspaper 4 JUL [4TH of JULY]	26,000,000	36,000,000	36,000,000

Subsidy to the Yugoslav Red Cross

825 06-2	Financing the work program of the Presidium	33,071,000	53,713,825	53,713,825
826 06-2	Missing persons service	2,412,000	2,412,000	2,412,000
827 06-2	Membership dues in the League and the Mediterranean Con- ference of National Red Cross and Red Crescent Societies	10,056,000	10,056,000	10,056,000
828 06-2	Defense -related projects	1,920,000	1,920,000	1,920,000
829 06-2	Center for training Red Cross and Red Crescent personnel from the developing countries and non- aligned countries, as well as in those countries	4,500,000	4,500,000	4,500,000
830 06-2	International humani- tarian aid in case of natural and other large-scale disasters	1,216,000	1,216,000	1,216,000

Subsidy to the Yugoslav League for Peace,
Independence and Equality of Nations

831 06-2	Financing the work program of the League	6,518,000	9,170,793	9,170,793
----------	---	-----------	-----------	-----------

Subsidy to the Federation of United Nations Associations of Yugoslavia

832 06-2	Financing the work program of the Federation	1,300,000	1,300,000	1,300,000
----------	--	-----------	-----------	-----------

Subsidy to the Federation of Reserve Military Officers of Yugoslavia

833 06-2	Financing the work program of the Federation	20,900,000	27,275,524	27,275,524
----------	--	------------	------------	------------

Federation for Physical Education of Yugoslavia

834 06-2	Expenses of Yugo- slavia's interna- tional activities in the field of physical education	212,336,000	289,336,000	289,336,000
835 06-2	Extraordinary pro- grams of sporting events being held only in 1985	68,009,000	100,834,000	100,834,000
836 06-2	Funds for SPENS	15,000,000	15,000,000	15,000,000

Popular Technology--Federation of Organizations
for Popular Technical Education of Yugoslavia

837 06-2	For international activities of Yugo- slavia in the field of popular technical education	16,750,000	16,750,000	16,750,000

CZECHOSLOVAKIA

HUSAK SPEECHES, INTERVIEWS PUBLISHED IN BOOK

LD260406 Prague CTK in English 1848 GMT 25 Sep 86

[Text] London, 25 Sep (CTK)--A book of speeches and articles by Gustav Husak, general secretary of the Communist Party of Czechoslovakia and Czechoslovak President, issued in English by leading British publishers Pergamon Press, was officially introduced to the public here today.

The official ceremony was attended by representatives of British political and public life as well as members of diplomatic corps. In speeches, Czechoslovak Ambassador to Britain Jan Fidler and the publisher, Robert Maxwell, stressed the importance of the book in promoting knowledge about the Czechoslovak Socialist Republic.

The selection of speeches and articles by Gustav Husak is appearing in a series on world statesmen in which Pergamon Press has already published collective works by the supreme representatives of a number of other socialist countries and recently also a collection of speeches by General Secretary of the Communist Party of the Soviet Union Mikhail Gorbachev.

Gustav Husak's book contains his major speeches and articles of the period during which he has been at the head of the Central Committee of the Communist Party of Czechoslovakia. It particularly includes the reports he delivered to the 14th, 16th and 17th Congress of the party, which evaluate the results of socialist construction in the particular periods and develop the general line of the construction of socialist society.

There are also Gustav Husak's speeches explaining the historical road and experiences of the Communist Party and the people of Czechoslovakia, the purpose and aims of the struggle for the overthrow of capitalism and construction of a new society in Czechoslovakia. These include primarily his address at the ceremonial session of the Czechoslovak Communist Party Central Committee on the 40th anniversary of the culmination of the national liberation struggle and the liberation of Czechoslovakia, Gustav Husak's articles on the 60th anniversary of the founding of the Communist Party of Czechoslovakia and the 40th anniversary of the Slovak national uprising. Other materials included in the book, such as his addresses at the 1975 Helsinki Conference and the 1983 world peace assembly in Prague expound the peace character of Czechoslovakia's foreign policy.

The book also contains a brief biography of Gustav Husak, photographs from various periods of his life, his meetings with workers and foreign representatives as well as from his visits to various countries.

Also included in the book is an interview given by Gustav Husak to the publisher, Pergamon Press Chairman Robert Maxwell, during his visit to Prague last spring. The interview covers a broad range of questions of the internal, foreign, economic and social policy of the Communist Party of Czechoslovakia, the record and prospects of socialist development in Czechoslovakia and some other problems.

In his preface to the book, Gustav Husak wrote: "I am aware of the deep differences in opinions concerning the evaluation of real socialism in the present-day world. However, I believe that the book will acquaint the reader with the motives behind the decision of the Czechoslovak people to embark on a socialist road and proceed along it consistently. The revolutionary changes which resulted from the national and democratic revolution and from the struggle for people's power in the post-war years were the culmination of many years of dedicated struggle for national existence, state independence, fundamental social rights, the entire logic of the international motion of the modern history of our nations."

The preface further stressed that the selected speeches and writings, covering the period since the early 1970's, mentioned both progress in the construction of the new society as well as difficulties accompanying it.

"I would be glad if the reader, in assessing the balance sheet and the prospects for the Czechoslovak Socialist Republic, bore in mind that socialism as a historically new social order is not a closed system but that it is undergoing constant changes in its dynamic development, that it is looking for, verifying, and creatively enriching ways and means how to develop its possibilities and superior qualities more fully."

A preface written for the book by Robert Maxwell also underscores the importance of mutual knowledge for the development of peaceful coexistence.

Negotiations are currently underway on another publication about Czechoslovakia in English by Pergamon press--A Czechoslovak encyclopedia which would give a comprehensive picture of Czechoslovak history and nature and the work and culture of the country's people.

WALESZA, FORMER POLITICAL PRISONERS AT JASNA GORA MASS

LD211956 Vatican City International Service in Polish 1800 GMT 21 Sep 86

[Excerpts] The fourth all-Polish pilgrimage of working people is taking place on Jasna Gora today. The ceremonial holy mass, celebrate at 1100 hours on the Summit of Jasna Gora by 100 priests, was led by Cardinal Henryk Gulbinowicz. It was attended by about 100,000 people. Also present was Lech Walesa, Nobel prize winner; the mother of Father Popieluszko; and former political prisoners, who recently regained their freedom.

The day of prayer by working people on Jasna Gora began yesterday. The Jasna Gora summit was specially decorated for the occasion. Its main element was a 7-meter Poznan cross, making it appear as if the Cross of Christ was accompanied by the Cross of the nation, with the inscription: For freedom, the law, and bread. Dates are inscribed under the cross, recalling historic events in the homeland: 1956, when the workers took to the streets from factories in Poznan, shouting for bread; 1968, the nationwide protest by students; 1970, the bloody December events on the coast; 1976, the clashes in Radom, caused by the food price rises; and 1980, the creation of Solidarity.

At 1900, a holy mass, concelebrated together with 60 worker-pastors, was led by bishop Stanislaw Nowak, Czestochowa ordinary. The Jasna Gora Appeal was led by Cardinal Henryk Gulbinowicz, chairman of the Episcopate's commission for Pastoral work among working people. On the fifth anniversary of the proclamation by John Paul II of the encyclical 'Laborem Exercens,' the Wroclaw Metropolitan said, we come to strengthen ourselves and to become immune to the dangers threatening the Polish soul. Joyful at the release from prison of people of conscience, we hope new conditions will arise to shape a true national accord, without which it will not be possible to move the homeland out of the most profound crisis in postwar history. Together with the holy father, we pray that the new chances are not squandered. We embrace in thought, heart, and prayer those Poles who have emigrated. We join with all neighboring nations, so that the Kingdom of Christ, who is King of peace and love, may be strengthened. May, our nation, and the whole world through the intercession of Mary, be inspired with a love of unity and peace.

HUNGARIAN DAILY INTERVIEWS JERZY URBAN ON AMNESTY

AU011054 Budapest MAGYAR HIRLAP in Hungarian 23 Sep 86 p 2

[Interview given by Polish Government Spokesman Minister Jerzy Urban to MAGYAR HIRLAP Deputy Editor in Chief Jozsef Szaszi: "Polish Spokesman Jerzy Urban on Political Prisoners and the Economy--We Wait Until They Finish Drying Off...." date and place not given; first paragraph is newspaper's introduction.]

[Text] Minister Jerzy Urban, Polish Government spokesman, who recently paid a visit to Hungary, met with the representatives of the Hungarian press prior to his departure, among them our paper's Deputy Editor in Chief Jozsef Szaszi. In the following, we publish the questions put by our staff member and the minister's answers.

[Szaszi] Much has been said recently about the domestic and foreign policy effects of the release of political prisoners in Poland. This is a step that has stirred up a considerable reaction both at home and abroad. Can we count on some sort of positive foreign policy developments in the wake of this Polish decision and, if so, in the case of what Western countries?

[Urban] Our intention is to eliminate the category of political prisoner in Poland. Whether we will succeed in this or not also depends on the other side. One of the leaders of the opposition, Bujak, claims that he will continue the struggle. It is natural for him to say this. But he also needs means in order to be able to continue the struggle. We do not want to fight against his intention to struggle. The political prisoners are only just beginning to leave prison; not everyone is out yet. Those who are out feel obliged to make declarations, declarations intended not for us but for their partners. Various declarations are also voiced in the churches. These declarations signal the beginning of a new activity. We are aware that anyone who leaves the bathtub must dry off. Now we are waiting till they finish drying off.

I would mention a few words about the background to our decision. What the West is now claiming, is not true, namely, that we are releasing political prisoners only in order to be able to get new credit from the West. We do not really count on any new kind of credit. There are internal motives behind our decision. It is simply the consequence of the fact that our enemies' political weight is bigger if they are in prison. This political weight, however, immediately decreases once they find themselves in the open air; at

that moment, they cease to be heroes. It is no accident that one extremist figure of the antisocialist opposition, one of the former leaders of Wroclaw Solidarity, for example, simply hung onto the prison rails and refused to leave the prison. Previously, however, the West had begun a huge campaign for his release, saying that he is a sick man whose health will be undermined by prison conditions.

We do not intend to begin a serious political dialogue with representatives of this opposition, but we do want their distrust to disappear and we want them to stop regarding themselves as enemies. If we talk about national consensus, we must try to win over as many people as possible from among the members of the opposition. It is not a popular thing to imprison people for their political activities, and that is true of Poland too. And we do not wish to accept this unpopularity. And this is another reason for our decision to release these prisoners. Of course, sabotage and political murder are quite a different thing: We cannot tolerate them. The release of political prisoners, however, can contribute positively to the national consensus.

We also have ideas concerning the church. The fact that we release political prisoners can facilitate the dialogue between state and church. From now on, the church does not have to remind us that we have political prisoners. In order for the church to also take responsibility for the consequences of this step, we asked church leaders to persuade members of the opposition cooperating with the church to curb their activity.

The fourth consideration leading us to make this decision was indeed our wish to influence the attitude of the West. In withholding credits, the West consistently claimed that we had political prisoners. Several Western governments wish to improve relations with us. Well, if this is really what they are aiming at, here is the opportunity to improve relations with our country. There are, of course, governments that do not wish to do this at all. The U.S. Administration, for example--like the majority of Western governments--expressed its satisfaction at the release of political prisoners. But we already know the new demands presented by the U.S. administration, demands that are in fact not new. Washington urges us to "renew pluralism in the trade union movement." This is practically the same as the demand to revive Solidarity. To tell the truth, we do not expect much from the Western governments, particularly the United States, in the wake of this recent step of ours, particularly concerning the supply of credit.

[Szaszi] Obviously, there will also be Western countries which will express a degree of understanding for this Polish step?

[Urban] I can say that the release of political prisoners has already led to certain favorable foreign policy effects. However, it is too early to evaluate this effect. Nevertheless, we can count on the possibility of improving relations with the FRG, France, or Italy. This is less true concerning Great Britain, as this country is too close to Washington's policy. In the case of the United States, it would be a positive development if they took real steps to promote the normalization of relations, but it is probably too early to expect such developments.

Besides, I would like to stress that there is no question of some sort of cooperation with the opposition that maintains ties with foreign forces and which desires to harm us. We are, however, ready to cooperate with members of the opposition whose attitude is based on respect for the Constitution, which enables us to cooperate with them. Here we are talking about people who do not agree with our policy but who accept, nevertheless, the stipulations of the Constitution. Here we are talking about people who stood on the other side of the barricade but who have modified their views. We can cooperate with them for the benefit of national consensus. I do not have to stress how much this policy resembles the Kadar's conception announced some 20 years ago.

[Szaszsi] Comrade Urban, the improvement of the economic situation is an important party of consolidating domestic policy. To what degree is the Polish Government satisfied with the current year's economic performances so far?

[Urban] We have had a very good agricultural year, this is the third consecutive good year, and it is expected to be even better than the previous year. Our agricultural results, therefore, are good. In industry, the implementation of our goals exceeded the plan in the first half of the current year, although we recorded a slight regression in August. We would like the process of acceleration to last till the end of the year. In spite of a good growth rate, we have difficulties with the food supply. Problems are also caused by the state of neglect in certain industrial sectors and by shortages in their raw material supplies. Certain production capacities--for example in cement production--are not exploited adequately due to a shortage of coal. The situation in the construction industry is rather severe. Among the unfavorable economic processes we can also list the larger than planned wage outflow, which is a factor that increases inflation. In foreign trade we have an extremely difficult situation. Exports are not increasing sufficiently and imports are greater than expected. We have considerable problems in general concerning the entire balance of payments. We are paying back our debts to a much smaller extent than planned. Generally, the effects of spectacular political affairs are much smaller than those of the economic problems. In Poland we must live with the practical problems of the development of prices and wages.

[Szaszsi] It is not the first time that we greet you in Hungary, and I know that you are thoroughly informed about Hungarian-Polish relations. How do you see the possibilities of our economic cooperation in the wake of the recently held prime ministerial talks?

[Urban] I think the most important thing is industrial cooperation: the establishment of joint enterprises and linking the two countries' industries, something that can benefit both countries. In certain aspects we have similar problems and we must join forces.

[Szaszsi] In what areas is this possible?

[Urban] To answer more concretely, there are such possibilities in the vehicle industry, metallurgy, mining, and energy. The joint exploitation of Polish sulfur deposits can also be taken into consideration. We could also

cooperate in the production of television sets (we would supply the screens). We are also looking for possibilities of supporting each other's investments. Other areas of cooperation are the building industry, agricultural machine production, and bus production. In short, we see many still unexploited possibilities for cooperation in the sphere of the economy.

[Szasz] Comrade Urban, thank you for the interview.

ROMANIA

NEED TO COMBAT RELIGIOUS VIEWS AMONG YOUTH

Bucharest ERA SOCIALISTA in Romanian No 12, 30 Jun 86 pp 14-16

[Article by University Professor Dr Ioan Jinga: "The Materialist-Scientific Education of the Young People and Preparing Them for Life and Work"]

[Text] One of the main objectives of the RCP policy is to mansidedly prepare the young people for work and life, and in this respect the educational system plays a decisive role. Already in his report to the ninth congress Comrade Nicolae Ceausescu established long-term guidelines for developing the school at all levels in accordance with the socioeconomic requirements of the country and the changes occurring in the mentality of the working people, and stressed that "In our country the educational system plays a significant role in shaping the new generation and educating a new man, and in raising the cultural level and consciousness of all the people."

Along this line the party secretary general initiated a whole series of measures designed to develop and improve the educational system and to increasingly closely link it to life and to the needs of building socialism, thus laying the foundation for a rejuvenating concept based on the principle of organically blending education with scientific research, production, and social-political practice.

Characterized by unprecedented dynamics, profiting from unflagging attention and clear guidelines from Comrade Nicolae Ceausescu and from the direct guidance of Comrade Academician Dr Engineer Elena Ceausescu, chairman of the National Council of Science and Education, and enjoying an appropriate material and organizational framework, in the past 20 years our educational system underwent qualitative structural changes that have propelled it among the most developed educational systems in the world. The superiority and modern nature of the Romanian education stem precisely from its capacity to continuously adapt to changes in industry, agriculture, science and technology, in the working and professional world, culture, and in the living style of the working people. Conceived as a unitary system--and based on the principle of ongoing education--which embraces all the forms of education from preschool to adult education, our educational system in fact provides multilateral training for the young people and prepares them for work and life and for participating in the present and future leadership of the society. At the science and education congress, Comrade Nicolae Ceausescu requested

further steps to raise education up to the level of the requirements of the new scientific-technical revolution and the comprehensively developed socialist society. In order to achieve this objective we must first and foremost base the entire training of the youth on our party's revolutionary outlook of life and the world.

As is known, social consciousness may at a certain point find itself trailing behind social life. Consequently, consistent measures and well coordinated theoretical, ideological, political, and cultural-educational actions are required to ensure the fullest possible accord between these two aspects of social development.

One of the possible causes of such a disparity is the persistence of mystical and religious mentalities and practices in people's thinking and behavior, the roots of which are lost in the most distant past. Although as an effect of the unprecedented progress of science the influence of religion has somewhat receded in the world, religious beliefs are still widespread and are sometimes even gaining ground because of factors that differ according to social system, social class, and individuals. While in societies based on exploitation and oppression the persistence of religion is based primarily on structural, class factors, in the socialist society it is mainly due to the impact of tradition or certain individual psychological traits.

In order to survive and tighten its grip on the masses, religion persistently seeks new form of social "adjustment," of "adapting" its dogmas and practices, one the one hand, to contemporary scientific knowledge, and on the other hand, to the searchings and interests of the youth. While certain religions utterly forbid their faithful to participate in social life, forcing them to evade civic obligations, others, on the contrary, seek to become involved in the political leadership of the society, thereby having recourse even to various violent and antisocial practices. Certain cults and sects still today manifest the same intolerance toward science as in the past, while others, more "adaptable" to reality, promote the idea of "compatibility" between science and religion with a view to distorting scientific truths and keeping their members under the influence of religious dogmas which they try to "modernize" and withdraw from the sphere of traditional taboos by giving them the appearance of scientific theory.

The patent purpose of diverting people's attention from reality and channeling it toward an illusory "happiness" in a realm far removed from our world is to manipulate the minds and steer the actions of the individual in a direction opposed to his vital interests, which can go as far as depersonalization and consequently, imposed social passivity. In these conditions, it is only natural that in the socialist society special attention should be paid to religious disaffection and to creating the conditions necessary for the many-sided assertion of the human personality and the social integration of each individual in keeping with his real aptitudes and potential, and with the general requirements of social development.

Comrade Nicolae Ceausescu has stated that "The persistence of mystical and retrograde concepts in some people's thinking prevents them from fully asserting themselves in social life. In the era of the great scientific-

technical revolution, when the people are emerging as the conscious makers of all material and cultural assets, it is an anachronism to have people--even party members--who still believe in supernatural forces." Along this line, the party secretary general stressed that "A resolute attitude must be adopted against the various mystical and obscurantist beliefs that prevent understanding of the real relationship between man and nature, the laws governing the universe, and the objective requirements of social development, and that constitute a stumbling block in man's struggle to consciously create his own fate."

Currently, the availability of objective economic, social, and cultural factors and party-led political-ideological and cultural-educational actions make it easier to free the working people from the moral defects of the past. The development of the material-technical resources of the society, improved social relations, a higher level of general education, culture, and knowledge, and increased material and cultural wellbeing provide a favorable framework for efficiently carrying out the materialist-scientific education of the broad masses of working people. Naturally, the results of this educational activity are greatly determined by its power to convince and influence people and by the degree to which such actions penetrate the "inner world" of each individual, thus freeing him from any mystical beliefs. People can be spiritually emancipated only through systematic and continuous education carried out with competence, tact, and patience, and through the combined efforts of all the progressive forces of our socialist society, and in order to promote strategies suited to a materialist-scientific education we must study--with the aid of scientific means of investigation--and understand the dynamics of the quantitative and qualitative changes affecting the religious beliefs of each target group at a certain stage. This is the only way to ensure a differentiated, even customized impact, in view of the fact that "mass" treatment applied to an entire heterogeneous group can produce the opposite results to those expected.

Sociological studies done in our country and abroad highlight the fact that religious faith is based on a great diversity of motives. In brief, the following three major motives appear to dominate: the power of tradition (manifested in the influence of family and social environment--friends, acquaintances); the "attraction" of religious rituals; and the illusion of "eternal happiness" in an afterlife. Tradition was the motive most frequently cited by the study subjects, which led to the conclusion that the materialist-scientific education of the youth must begin in the family, by making all the parents understand that the religious indoctrination of very young children for a long time deprives them of a conscious freedom of choice. At the same time, we note that often religiosity based on intellectual or emotional motivation is stronger than that based on tradition.

It is important that studies such as the above should establish to what degree the persons questioned are aware of and understand the meaning of the religious doctrines, how strongly they believe in them, and to what an extent they influence their outlook of the world and life and their behavior on the job, in the family, and in society. The frequency with which religious activities are attended, and acceptance or rejection of atheists or people of other religions are also important elements for pinpointing the objectives,

substance, forms, and methods of materialist-scientific education. In order to establish differentiated targets of materialist-scientific education--and consequently, organize highly efficient actions--one must understand and take into account (in planning and carrying out the practical activities) the factors favoring or inhibiting the emergence and persistence of individual religiousness. If, for example, as one study showed, the level of information influences the degree of religiousness of the youth, it is natural that in our educational work we should put the stress on providing better scientific information for the youth by better correlating school programs with mass media and cultural programs, as well on the philosophical interpretation of knowledge and on shaping materialistic convictions.

Our party believes that the materialist-scientific education of the youth and of the adult masses is an integral part of the revolutionary process of changing people's thinking and behavior and freeing them from the moral flaws of the past, from superstition and prejudice, and arming them with a scientific system for understanding the world and life, with the necessary tools for distinguishing between good and evil and between progressive and retrograde, and with a system of values suited to our socialist system and to the profoundly humanistic policy of the party and state. The party program clearly states that "adopting a scientific concept of the world and developing the socialist consciousness of the masses constitute an essential factor for building the comprehensively developed socialist society and progressing toward communism."

Preventing and combating mystical mentalities and the practice of religious rituals is a complex process based on unity of requirements and actions among all the elements of the educational system, within which the school occupies a most important place, being the specially organized social institution that encompasses all of the country's young people within its sphere of influence for a minimum of 10 years.

While respecting the freedom of the legal religious denominations and the beliefs of each of them, the materialist-scientific education can gain ground in the struggle against obscurantism only by making prevail--at a collective and individual level--the truth that man is his own master and no supernatural force can determine his conscience, feelings, and attitudes outside his own free will.

The process of education as a process of learning provides the best suited framework for inculcating in children and youth the scientific idea of the world and life. There is practically no subject of study that cannot contribute, from the positions of dialectical and historical materialism, to shaping this idea and to forming appropriate philosophical conclusions from the new scientific data. In support of this claim we can cite several examples of themes culled from the various subjects taught in highschool, in order to highlight the enormous resources that the school has to scientifically educate the youth: the contribution of mechanics to shaping the materialist concept of the universe; the theory of relativity and the development of the scientific concept of time and space; the complementarity and determinant nature of physics; the complexity of the structure of matter as a confirmation of the material unity of the world and refutation of the theological conclusions on

the essence of the world; the periodical system of elements as proof of the capacity to understand, foresee, and change the world; chemical balance as a momentum of the unity and struggle of opposites; laboratory organic synthesis as a crucial point in the development of science and in combating spiritualistic, theological, and fatalistic concepts; the critique of religious concepts concerning the beginning of life; the cognizable nature of the laws that determine trait inheritance and evolutionism--the critique of fideism; materialist-dialectical explanation of the movement of the universe; the critique of nonscientific interpretations of outer space; the educational role of environmental geography for adopting an active attitude toward the protection of nature and achieving balanced relationship between man and the environment; the contribution of the great classical writers to combating obscurantism and retrograde, mystical ideas; the secularization of myths as an expression of the development of society, culture, and science; religion as an obstacle to the development of culture, and so forth.

All these themes, accompanied by appropriate teaching material (films, slides, laboratory equipment, etc.) and correlated with the scientific conclusions learned from other classes and practical, demonstrative, and experimental activities, ensure the students' access to the foundations of the contemporary sciences and their intrinsic truths, and offer them alternatives to the religious principles and dogmas that provide phantasmal and distorted explanations for the surrounding world. Evidently, the power of persuasion of the scientific theses and ideas depends to a great extent on the competence of the educators and on the soundness of their own scientific concept of the world and life.

Consistently steering the entire educational process on the basis of the RCP's scientific concepts; ensuring the scientific character of each educational activity; deriving educational benefits from the curriculum and from the other forms of school activities; continuously comparing scientific and unscientific theses; achieving a correlation among school subjects and between them and production activities with a view to giving students a general overview of occurrences in nature and in society; cultivating ethical norms based on the materialist-dialectical and historical philosophy, and continuously raising the political, ideological, scientific, and cultural level of the educators--all these are the levers through which the school can improve the quality of the atheistic education of the youth.

The educational means of the school are complemented by the resources of the children and youth organizations, such as science and applied technology circles; science teams; scientific debate clubs; visits to museums, plants, factories, research institutes, astronomic observatories and planetariums, etc., at which young people can meet with scientists and men of culture, learn the secrets of scientific research and ask questions concerning the problems they may have encountered on the sinuous path to scientific knowledge, and--why not?--bring face to face mystical explanations to natural and societal phenomena they may have received from grandparents, parents, or acquaintances with the arguments offered by scholars and experts.

Regardless of the forms and means utilized, the contents of methodology of the materialist-scientific education must be adapted to the level of understanding

of the children and youth and to their age. With highschool and vocational school students one can initiate debates, case studies, and analyze literary works that generate mystical interpretations or aspects of the contemporary religious phenomenon; in the case of seniors one can go as far as generalizations and abstractizations based on appropriate philosophical and theoretical preparation. In the case of low grades students one must use factual material selected from the surrounding reality, adapted to their thinking, low volume of knowledge, and limited experience, such as the observation of natural phenomena (sunrise and sunset, thunder and lightning, the succession of seasons, the growth and development of plants and animals, etc.), helping the children grasp the essential and the causal links between phenomena. Similarly, explaining, narrating, or reading various texts, accompanied by audiovisual aids such as slides, films, records, or tapes are very important for teaching the children about life, death, birth, growth, development, time, space, etc., something that is vital for shaping their materialist-dialectical concepts.

Another very important requirement for children and youth of all ages is that the teaching of scientific information should be accompanied by philosophical conclusions, and that the entire system of actions and influences should converge on shaping sound materialist convictions and behavioral habits based on the most progressive achievements of science and human knowledge.

As is well known, our youth is being prepared for a concrete and active life of work; in the socialist society, the various factors of educational impact are mutually complementary. The theater and music establishments, publishing houses, press, radio and television, the "Song to Romania" national festival, scientific academies and societies, and political and professional organizations carry out extensive campaigns to disseminate scientific knowledge, the conclusions of dialectical and historical materialism, and the implications of science for the general development of the society. However, the cooperation and coordination of efforts and programs among these important factors are at times unsatisfactory, something that produces negative consequences regarding both the efficiency of education, and the persistence of anachronistic situations in the era of outer space flights. This situation is not caused by any shortage of appropriate political and organizational structures. A uniform program of political-ideological, scientific-technical, cultural-educational, and sports activities has been established for students; councils of political education and socialist culture have been organized, and more recently, councils of science and education, led by party bodies, in charge of coordinating programs and actions of materialist-scientific education. In these conditions, some of the shortcomings are mainly due to the inertia and formalism that sometimes characterize the activities of certain institutions and bodies that have been assigned tasks in this area. The materialist-scientific education of the youth is a concern that cannot suffer interruptions or formal activities. It must be built into the complex body of multilateral communist education and must be continuously steered toward the achievement of objectives such as: shaping scientific thinking; encouraging an interest in science and knowledge, and a passion for what is new; improving professional training; creatively involving the youth in resolving problems concerning the socioeconomic development of the country in keeping with the programs adopted by the 13th RCP Congress.

Above and beyond the explanatory aspect of clarifying problems of knowledge that have accompanied man throughout his historical evolution, the materialist-scientific education also has an important social dimension that contributes to integrating the individual in work and life, gives him confidence in himself and in humanity, permits him to assert himself and to fulfill his aptitudes and talents, and to consciously and actively participate in the progress of the society.

ROMANIA

TRENDS IN CONTEMPORARY FOLK SONG CRITICIZED

[Editorial Report] Bucharest SCINTEIA in Romanian No 13721, 3 October 1986 p 4; No 13722, 4 October 1986 p 4; and No 13723, 5 October 1986 p 4 publishes three related articles by Smaranda Oteanu and C. Stanescu, each about 2,400-words long, discussing critically certain tendencies in the contemporary folk song. The first installment sets the stage, the second gives examples of lyrics guilty of "pollution" and the third suggests "remedies."

Painting with a broad stroke, the authors begin with an overview of the origins, importance and influence of the Romanian folk song as an artistic genre unique to native peasantry. The first documented folk melodies date back to the 16th century. The authors state that researchers and musicologists took an interest in them from the beginning, an interest which culminated, most notably, in Bela Bartok's five volume collection published in the Hague after his death, listing 2,555 Romanian melodies.

Several major cultural figures are then mentioned as having been influenced by folklore in their work, including poets Eminescu, Alecsandri and Cosbuc, novelists Dalavrancea and Sadoveanu and scholars Hasdeu and Blaga. Testimonials from several of these figures are quoted on the importance of folklore. Eminescu considered it "purer than a tear drop and more valuable than gold." Alecsandri thought that "nothing could be more interesting than studying the character of our people as exemplified in our folk songs, which encompass heartfelt desires and all rays of genius." And Delavrancea, in a paper on patriotism, had this to say: "Upon hearing the 'Songs of the Romanian People,' Oltenians, Wallachians, Transylvanians, and Moldavians all felt like close brothers, brothers from the same tree, brothers by blood and by name, with the same dreams, the same pain, the same hope in the future."

Coming closer to the present, the national festival "A Hymn to Romania" is fostering, according to the authors, an ever closer scrutiny of "popular creativity in the area of folk songs. "New and powerful talents have made their appearance. Our ancient songs, inherited from our forefathers, are living a new and vigorous youth. Along with many other valuable creations, they constitute a powerful instrument of patriotic education, in the spirit of beauty, of a clean and healthy morality that is characteristic of an advanced people. Popular songs, old and new, have proven their educational value in directing people towards beauty and moral virtue, as attested by the many competitions and manifestations in each part of the country. In all these shows, the popular song is respected and celebrated, resounding with beauty and purity."

The first installment ends on a negative note, however. The authors state that not everyone is staying close to these "sacred norms which are required by the socialist, patriotic education of the masses." They proceed to explain and give examples of departures from these norms in the second installment.

Part two of the series opens with the comment that some vocal artists "are abandoning their sense of responsibility towards this invaluable treasure," i.e., the folk song. They are doing that by "replacing the old lyrics of a song with lyrics that are superficial, simplistic and even vulgar and indecent, in order to achieve a cheap and quick notoriety with the public." These artists are "borrowing" popular melodies for the sake of telling stories that are "sensational and vulgar" thus compromising the folk art genre.

Here are some examples of lyrics found by the authors to be objectionable. "Hey Mary, he Mary/ I'm going straight to jail/Sell the house and the car/I'm going to get what's coming to me/All that money I earned with my big mouth/Will be taken away at the courthouse.../Who'd have guessed/Dolanescu'd get thrown in jail/Dolanescu's on trial/And Mary's at the beach." These lyrics are unacceptable to the authors because they "present certain aspects of life that have nothing in common with traditional folklore."

Equally unacceptable are lyrics that deal with "melodramas, tearjerkers," with "pathetic farewells" and with "false promises men make to women" of a certain kind. It is inadmissible to write lines, the authors object, that harp on "biographical details about divorce or infidelity" and put them in a song. This runs counter to "good taste."

The authors wonder "how one can have any respect for an artist who flings at the public the following ballad: One day in the evening/I decided to become a thief/I stole a wallet/But they caught me right away/Wallet dear, wallet dear,/You'll be the death of me/You've ruined my life/Mine and my mother's!/At the Lizeeanu station/I sat reading the paper/And I stole a wallet/But it was empty..." These lyrics are deemed "an assault on the good reputation of folk creativity which has conveyed the hopes and desires of the people for many generations."

The subject of love is often treated in popular folk song. But, say the authors, this is always done with "remarkable discretion and purity," in marked contrast to "vulgarities" of which the following are given as examples: "I've loved you, young lass/I've loved you to death/I've loved you since you were little/You had no luck/Oh, oh, oh, my young lass/You're my happiness/You're my life." And "To have a passion in your life/To love anybody you want to/To have a passion in your life/To love the whole world." And "You're a truck driver/And your girlfriend is a tramp/You're a driver on the IMS/And your girlfriend is in high school/Until yesterday you were a driver for RATA/Today you're a sheepherder for your papa/And you take the sheep to be milked/Without an itinerary sheet." And "Bad luck, bad luck/You're not a man like other men/All your kids are hunch-backed/Bad luck, bad luck/Three more years/And your house'll be full of camels." Such lines and others of the same ilk which reflect "superficial attitudes" are said to "dump the popular folk song into the abyss of ugliness and moral darkness."

The last installment in the series is entitled "The Antidote to Pollution." It opens with the comment that singers and interpreters of popular folk songs must recognize an obligation to use their art for the sake of "elevating the spiritual life of the masses." The "moral and professional conscience" of these artists should be more important to them than their "material welfare." Thus, instead of setting to music lyrics which employ "vulgar language," thereby encouraging bad taste and "lack of respect" for the folk tradition, they should go to the Institute for Ethologic and Dialectologic Research, where there are plenty of "authentic pieces, full of freshness and beauty, which ought to inspire every creative person."

The article does not end here. The authors continue, speculating on other causes of these perceived negative trends in contemporary folk song interpretation. Perhaps certain "organizers of musical life" have failed to be vigilant enough in directing and controlling the course of events in this area; perhaps they've been too "tolerant, as evidenced by the superficiality with which they act in preparing a public performance." Then a reminder is issued that "the law clearly provides that no one may give a public performance of a repertory whose authenticity and quality have not been guaranteed. When those charged with making certain the law is followed don't do their duty, shut their eyes and close their ears to these polluting sounds, it goes without saying that the artistic and educative effect of folk art will be diminished."

The authors do not rest content with accusing merely "certain organizers of musical life" with failing to do their duty. The state recording company "Electrocord" is mentioned by name as having, during the last few years, "agreed to record some weak songs, works of ephemeral, doubtful value." The aforementioned Institute for Ethnologic and Dialectologic Research "cannot be altogether excused of responsibility for the appearance of these polluting elements." The Union of Composers and Musicologists is urged to "bring about a firm and prompt attitude on the part of music critics and composers towards any 'interpretative gesture' which might defile the luminous folkloric treasure."

The authors go even higher in the ladder of responsibility. They find that the Council for Socialist Culture and Education "sometimes allows unprepared performers" to go on the stage, and "in the spirit of tolerance, permits well-known interpreters to present songs and melodies that have not been verified beforehand." Under no circumstances, the authors continue, must a work be certified for public performance which "compromises folk music."

The final paragraph contains a lecture on "the aims of patriotic and humanist education." It reviews previously mentioned charges and suggestions.

DOLANC DISCUSSES ECONOMICS, SECURITY, BIRTHRATE IN KOSOVO

Pristina JEDINSTVO in Serbo-Croatian 29 Sep 86 pp 1, 3

[Excerpts] In a speech before the Prizren LC Presidium discussing the political-security and economic situation in this opstina, Stane Dolanc, member of the SFRY Presidency, said, "We find ourselves in a serious economic situation because of a fall in exports recently, as well as a decline in production and labor productivity. I know that you are under great pressure because of unemployment. But we often approach employment as a means of solving social problems. And as long as we consider unemployment to be a social problem and not an economic one, we cannot expect our economy to develop as we would like. Under this pressure investments are selected which appear effective in the short run, but nevertheless very rapidly are seen to be economically unjustified. This is often the result of a one-sided approach without detailed study of the market. Therefore, in the coming period one must give this more consideration."

Dolanc also noted the proliferation of grandiose projects both in the economy and outside it. He stressed that more consideration must be given to this because even the most developed countries of the world base their economy on small enterprises, the advantage of which lies especially in re-orienting and adapting production to the requirements of the market.

Speaking about the birthrate, Dolanc said, "I know that this is an unpleasant matter because it is being politicized. The existing birthrate in Kosovo, and also in other places, cannot be "covered" by production forces in 50 or even 100 years. We do not have the material possibilities for such a birthrate. Nowhere in the world where there is this economic potential can conditions be created for solving the problems which this [birthrate] brings. We communists must discuss this because the pressure of the younger generation for employment will be great. Indeed, help and support from all the republics and Vojvodina for the faster development of Kosovo has never been questioned. There is a readiness to help because you are in a most difficult economic situation but you must also show readiness in using all your potential and in using effectively and wisely the funds which you get."

In connection with so-called private clearing, Dolanc said that most people know how much hard currency there is, where it can be purchased, and the police also know this, as well as the party secretaries, communists, etc. But this has

become our national characteristic which is bringing us great damage. According to some accounts, at present there is about \$3 billion in private hands, while we as a country have to do I don't know what to get \$100 million. We will not eliminate foreign exchange accounts of citizens, but we also will not tolerate the present situation."

Speaking about proposals to supplement the constitution and implement the laws, Dolanc said: "I can tell you that the SFRY Presidency will not change a single letter which would... change the relations between the nations and nationalities or which would bring into question the federative system of the SFRY. The problem of respecting the laws and the legal order exists throughout the country. Without respect for the legal order and strict implementing of laws there is no economic stabilization and self-management. Economic measures, laws, regulations, and decrees are enacted, but they are not carried out in the republics and provinces. A stop must be made to this.

"I think the situation in the province is improving on the whole because there are no more public manifestations of a hostile nature on a large scale, but this does not mean that the situation is fully stable. One should do much more to realize the political platform of Kosovo, above all, the creation of mutual trust, in order to stop the process of emigration. I think we have entered a stage where the situation in Kosovo is being used to a large extent for the anti-communist struggle and what has happened here or in other areas of the country essentially comes down to a platform which is anticommunist and wants to present itself as a fighter for the national rights of Serbs and Montenegrins. Thus I can tell you that we have the same thing in Slovenia, Croatia, and other areas of the country where, in essence, through nationalism and through that which is placed allegedly at the head of the struggle for national rights, the attempt is made to secure a place for that which is a deviation from our communist ideology in our society. We communists should finally understand that we are a class organization and that the class struggle is not yet finished. The tasks from the stances of both presidiums should... be constantly before our eyes.

BRIEFS

HARASSMENT OF TEACHERS--Recently, cases of provocations, harassment, and physical attacks against Serbian and Montenegrin instructors, as well as against some professors of Albanian nationality, at Pristina's University have become more frequent. A group of 20 Serbian and Montenegrin professors, largely from the Natural Science-Mathematics Faculty in Pristina, requested a meeting day before yesterday with the rector to discuss the brutal attack on the dean of the Natural Science-Mathematics Faculty, Radivoj Papovic, in his home 4 days ago. Two unknown youths, Papovic told the authorities, has rung his doorbell... and as soon as he answered they demanded that he come down to the front of the building. The provocations and threats lasted more than 5 minutes. There probably would have been a physical attack if his building tenants had not immediately reported it to the security organs. Papovic managed to take refuge in his apartment and the youths ran away. All this has worried his colleagues who in their discussion with the rector, Bozidar Colakovic, said that this is not the first provocation... of professors at the university. They cited other examples of chicanery, harassment, and attacks on university professors of Serbian and Montenegrin nationality, as well as on their Albanian colleagues who have been most consistent in the struggle to stabilize the situation at this institution. A meeting was held immediately of the Committee for Territorial Defense and Social Self-protection at the university. [Excerpt] [Prisinta JEDINSTVO in Serbo-Croatian 20 Sep 86 p 7] /12232

KOSOVO SERB TEACHERS' PROTEST--The instruction program for Serbo-Croatian language and literature in elementary and secondary schools in Kosovo has been drawn up in an "irresponsible and bureaucratic way." It has ignored the opinion of the Society for Serbo-Croatian Language and Literature of Kosovo and the professors responsible for this in the Philosophical Faculty in Pristina. This was brought out in letters which the above society and professors have sent to educational and sociopolitical institutions of Kosovo and was discussed yesterday at a meeting of the Educational Council of Kosovo. Dissatisfaction of the teachers and professors also came out in the fact, as stated in the letters, that their suggestions were ignored by the province's educational organs and that the draft program was adopted on the basis of incomplete reports by the director of the Kosovo Institute for Schooling and incorrect statements in reports of the commission of the Kosovo Educational Council. In the letters it is proposed that draft plans and programs be returned to the departments and to the Society for Serbo-Croatian Language and Literature for correction of professional and scientific mistakes.
